Remote Sensing (遥感)

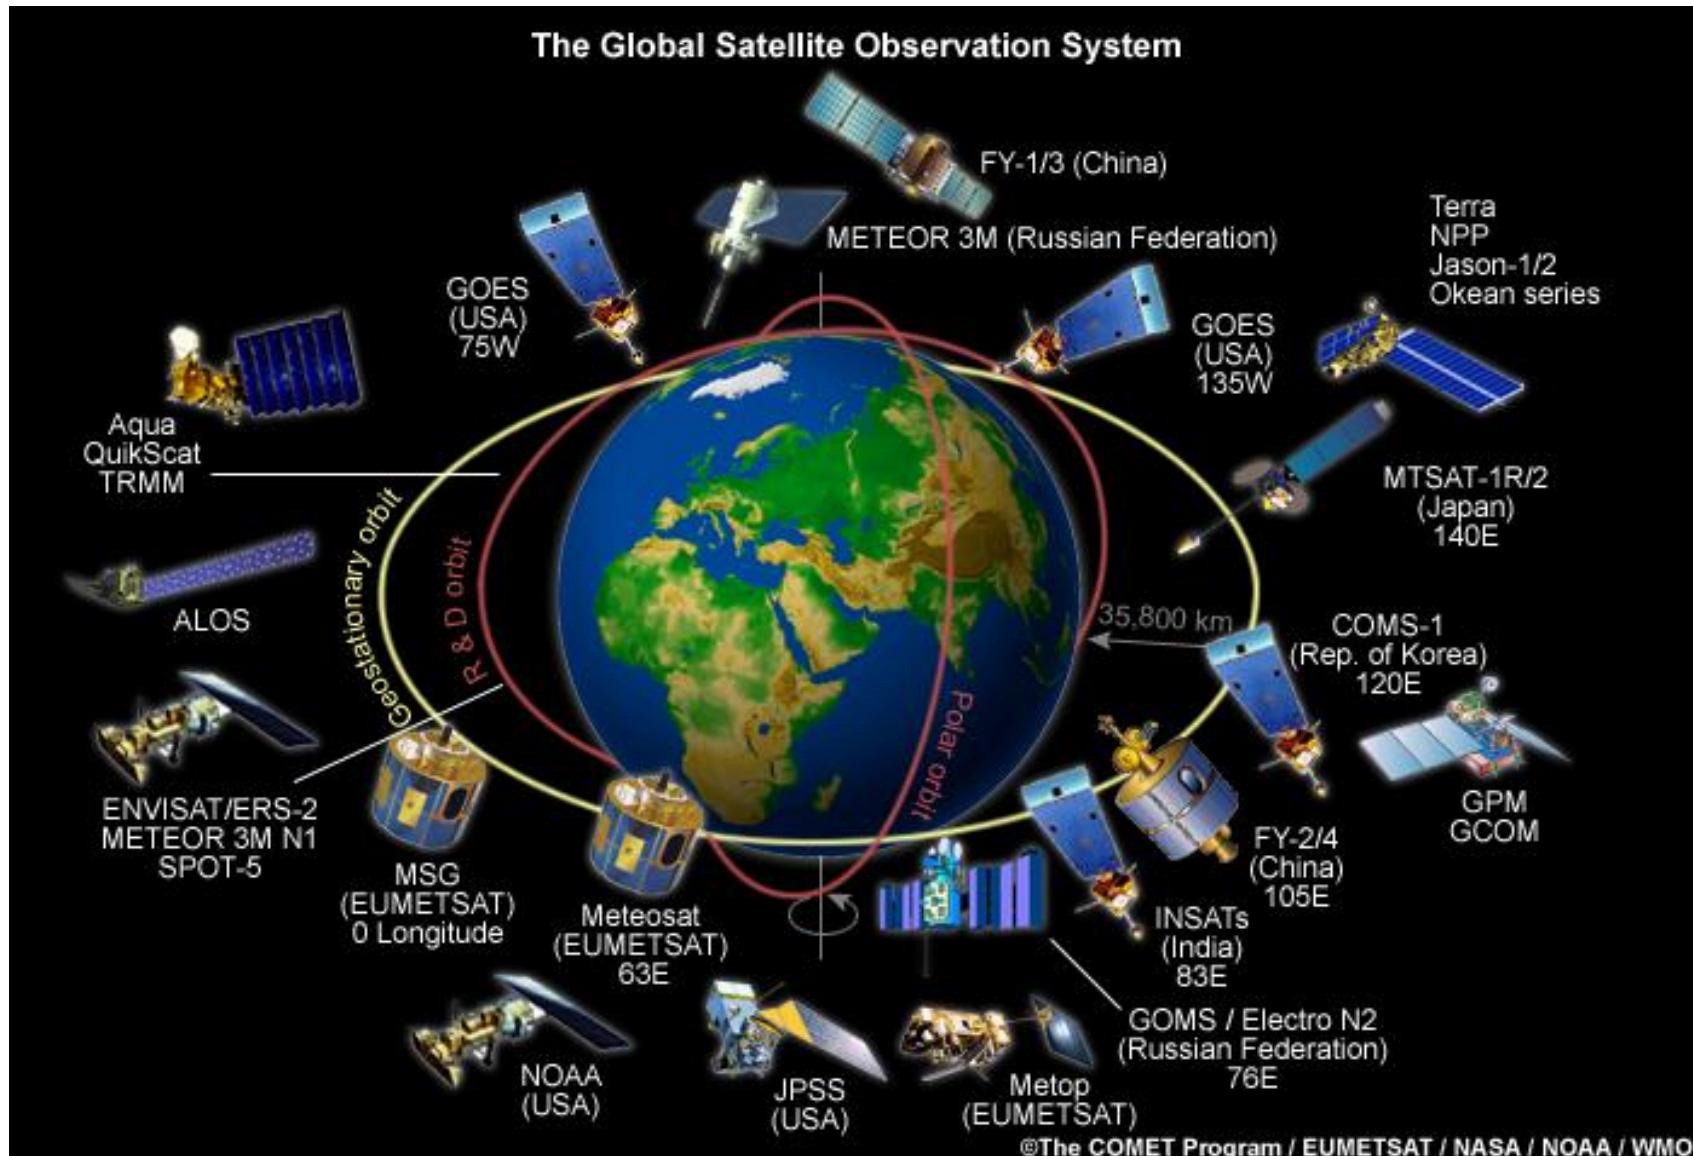

航空遥感

航天遥感

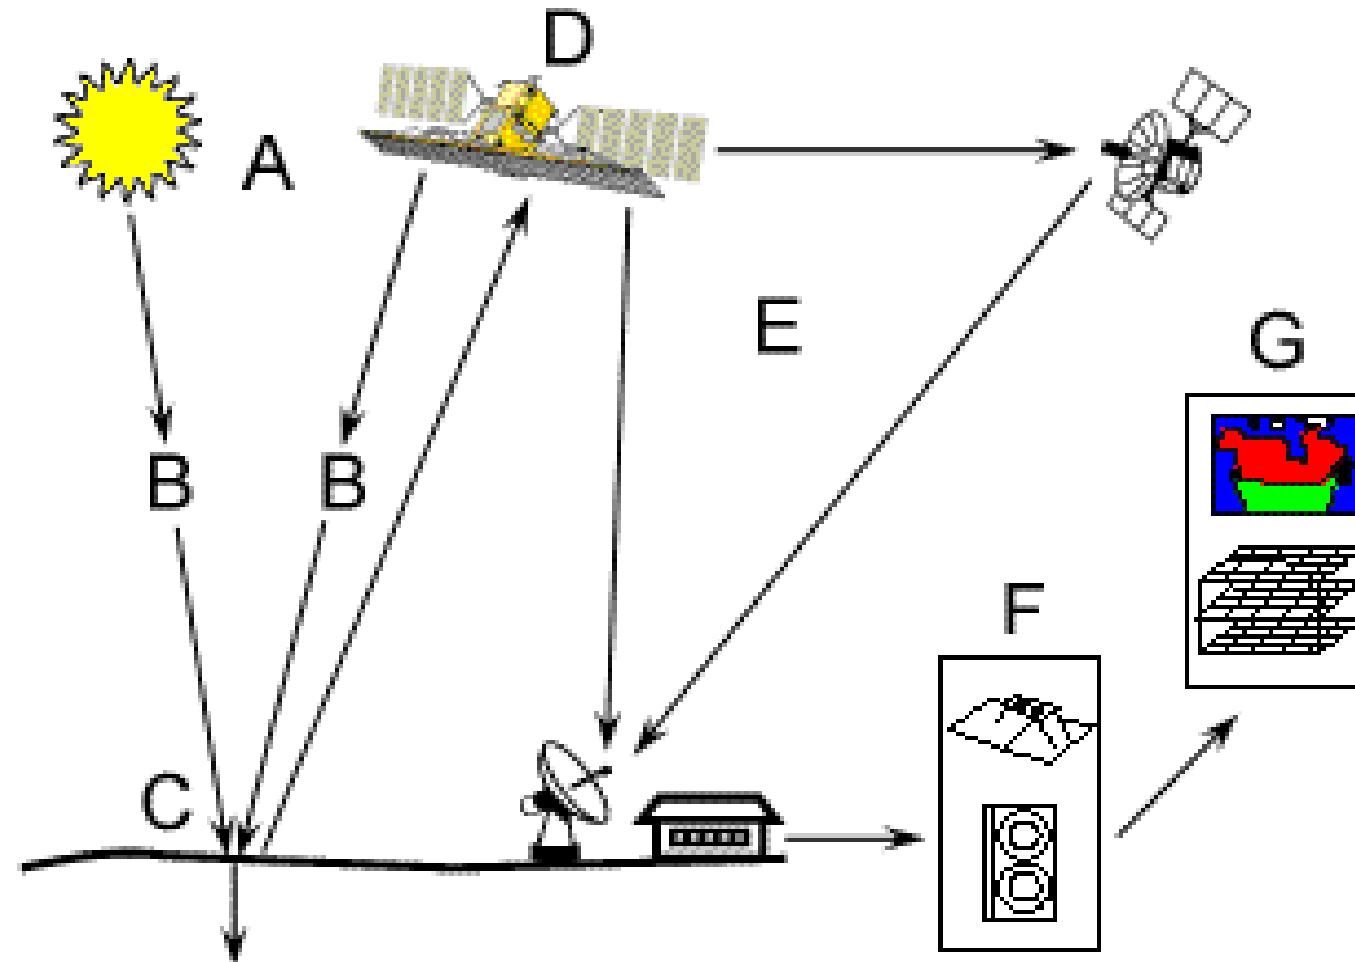

Remote Sensing (遥感)

Remote Sensing (遥感)

Remote Sensing (遥感)

Remote Sensing (遥感)

Remote sensing is the acquisition of information about an object or phenomenon **without making physical contact** with the object and thus in contrast to on site observation.

遥感，遥远的感知，是指非接触的，远距离的探测技术。

Remote Sensing (遥感)

In modern usage, the term generally refers to the use of **aerial sensor technologies** to detect and classify **objects on Earth** (both on the surface, and in the atmosphere and oceans) by means of propagated signals (e.g. **electromagnetic radiation**).

一般指运用传感器/遥感器对物体的电磁波的辐射、反射特性的探测，并根据其特性对物体的性质、特征和状态进行分析的理论、方法和应用的科学和技术。

Remote Sensing (遥感)

1983年美国摄影测量与遥感协会ASPRS:

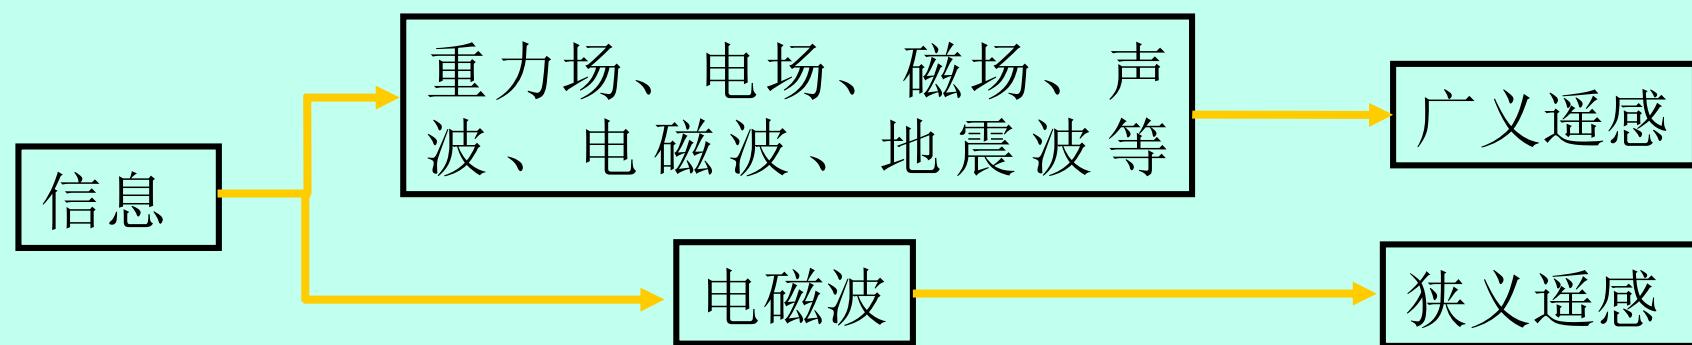

The measurement or acquisition of information of some property of an object or phenomenon, by a recording device that is not in physical or intimate contact with the object or phenomenon under study.

1988年ASPRS结合摄影测量与遥感:

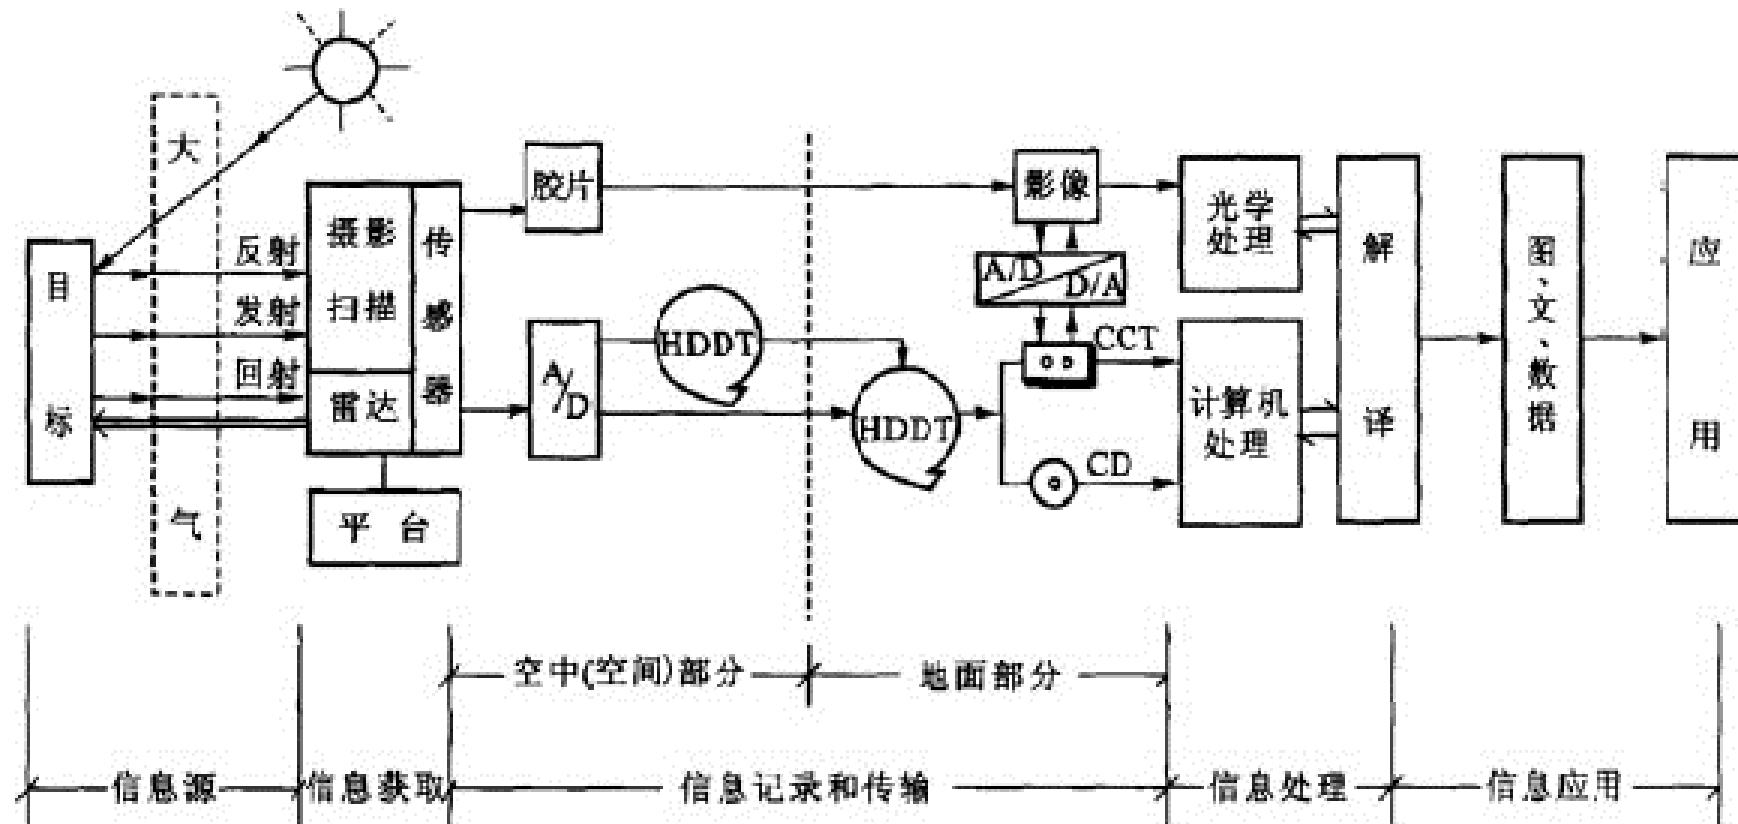

The art, science, and technology of obtaining reliable information about physical objects and the environment, through the process of recording, measuring and interpreting imagery and digital representations of energy patterns derived from non-contact sensor systems.

Remote Sensing (遥感)

遥感是指不直接接触物体本身，从工作平台上通过传感器探测和接收来自目标物体的信息，经过信息传输、加工处理及分析解译，识别物体和现象的属性及其空间分布等特征与变化规律的技术。

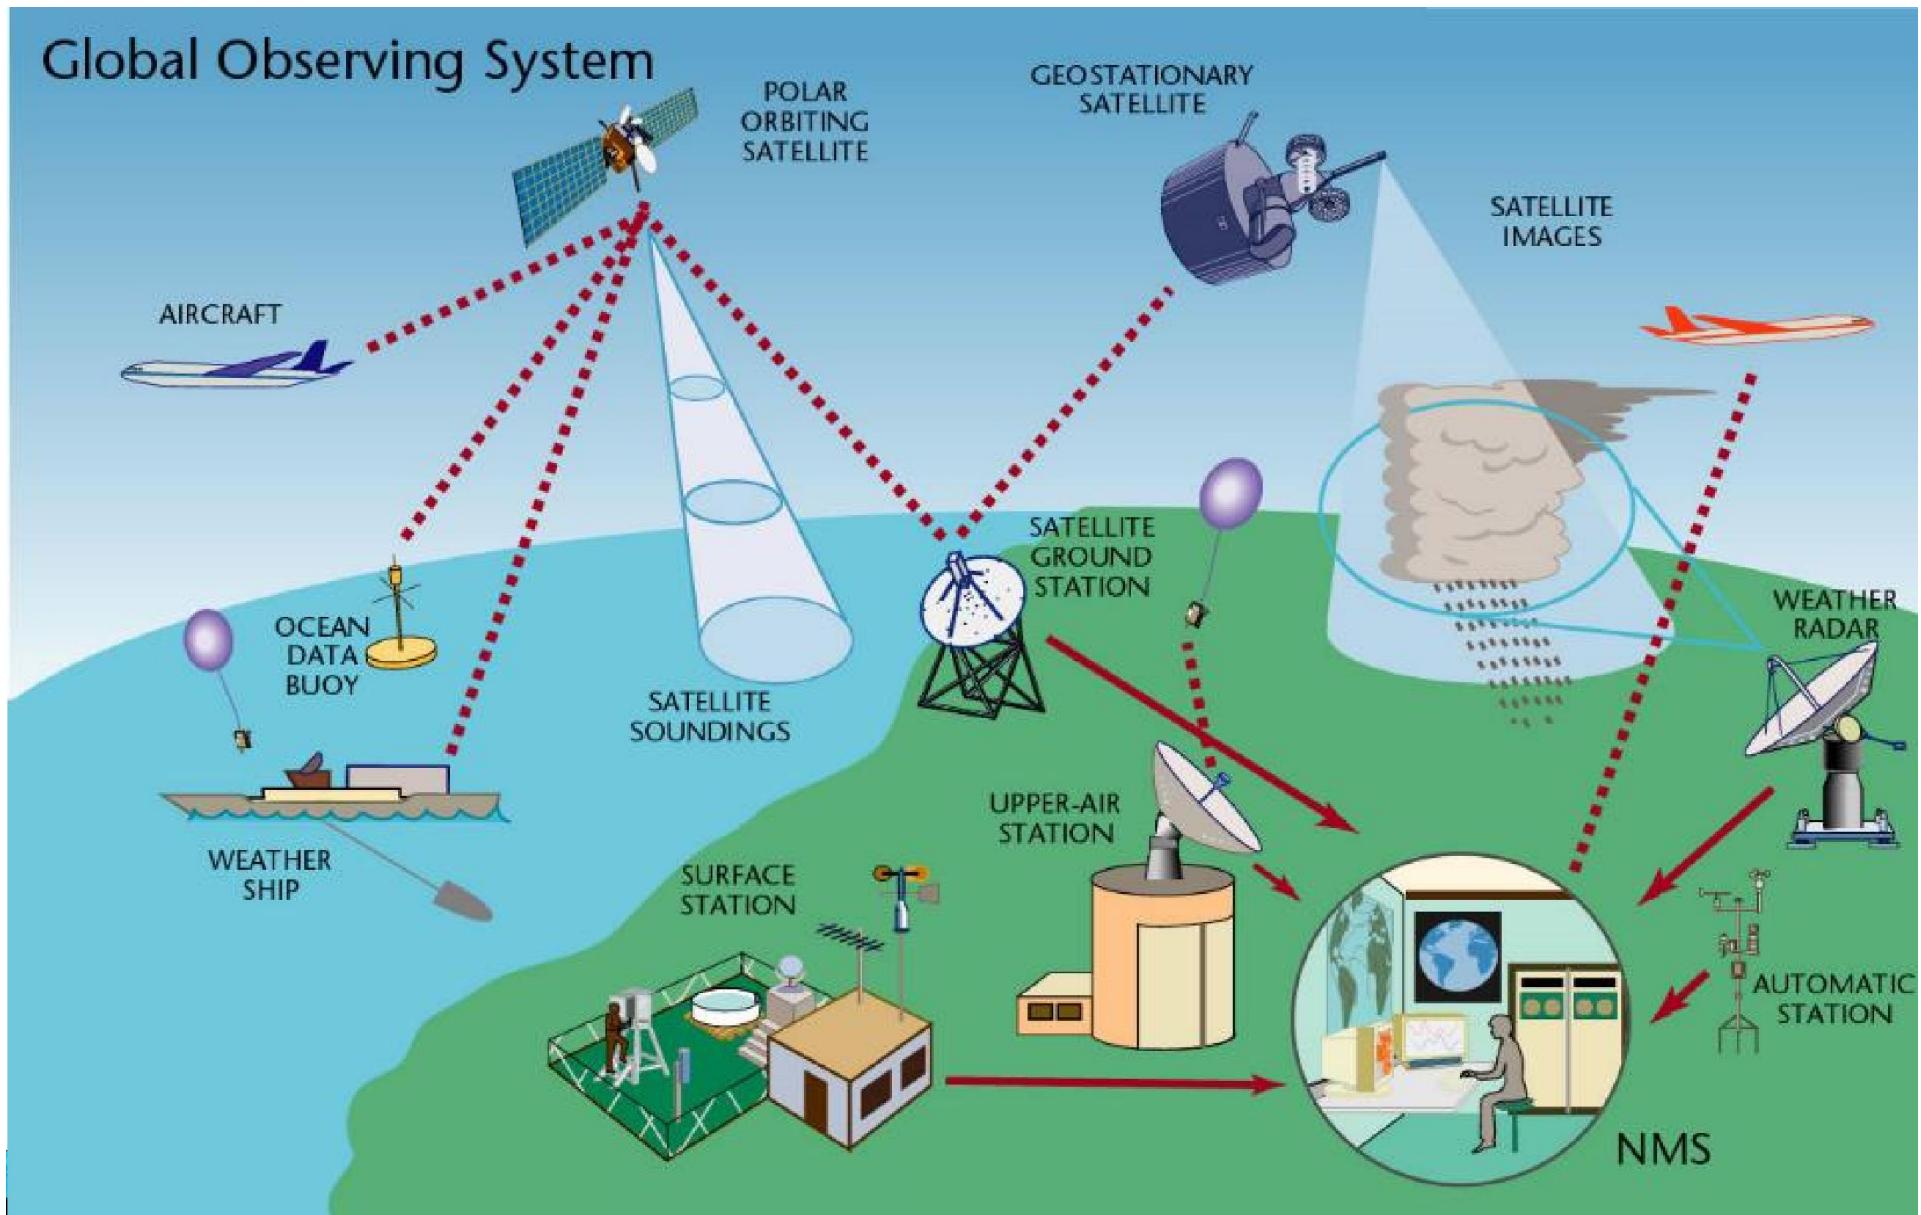

Remote Sensing (遥感)

遥感系统的组成

Remote Sensing (遥感)

Remote Sensing (遥感)

4、信息处理分析

5、信息应用

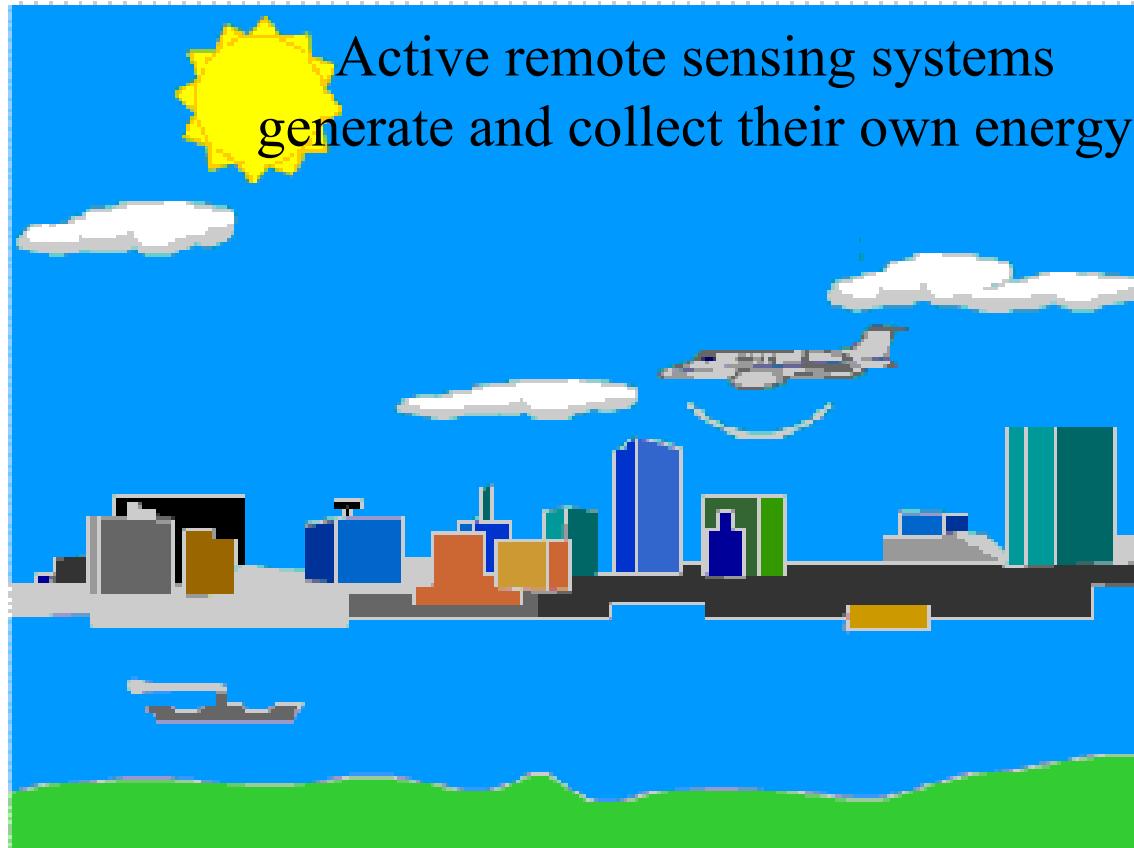

Passive Remote Sensing (被动遥感)

Active Remote Sensing (主动遥感)

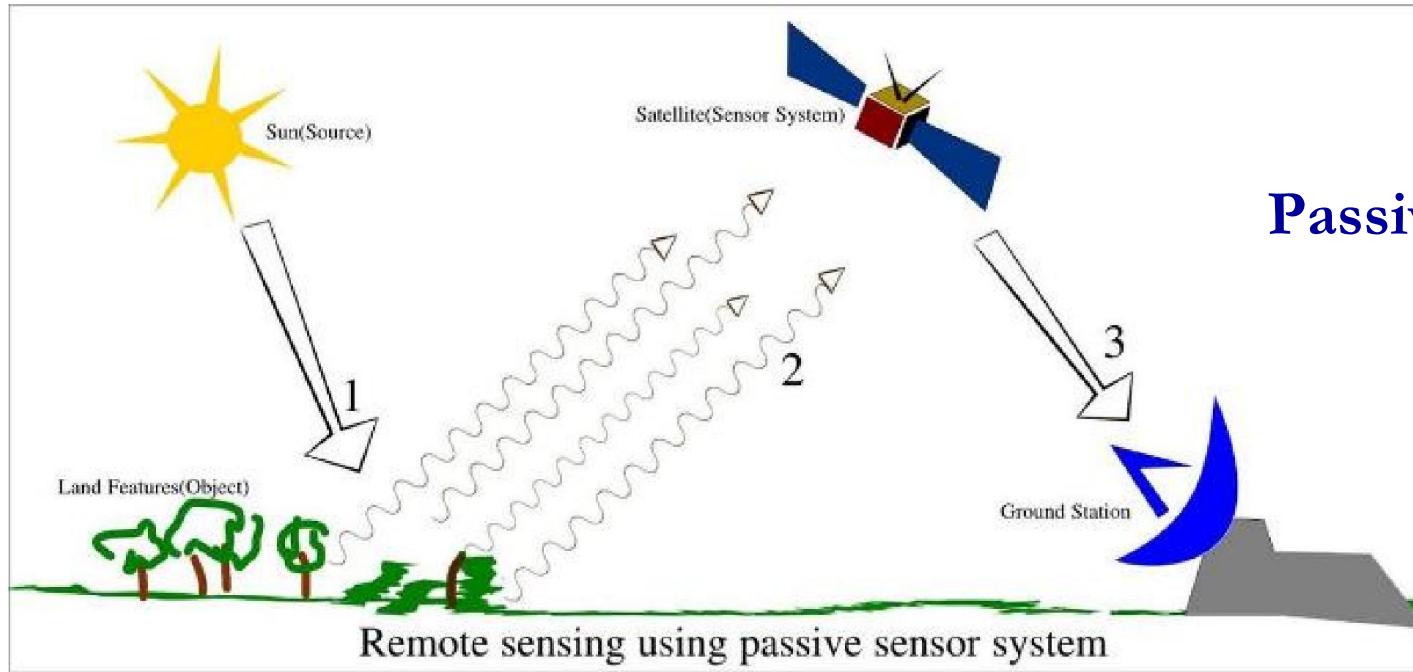

Remote Sensing (遥感)

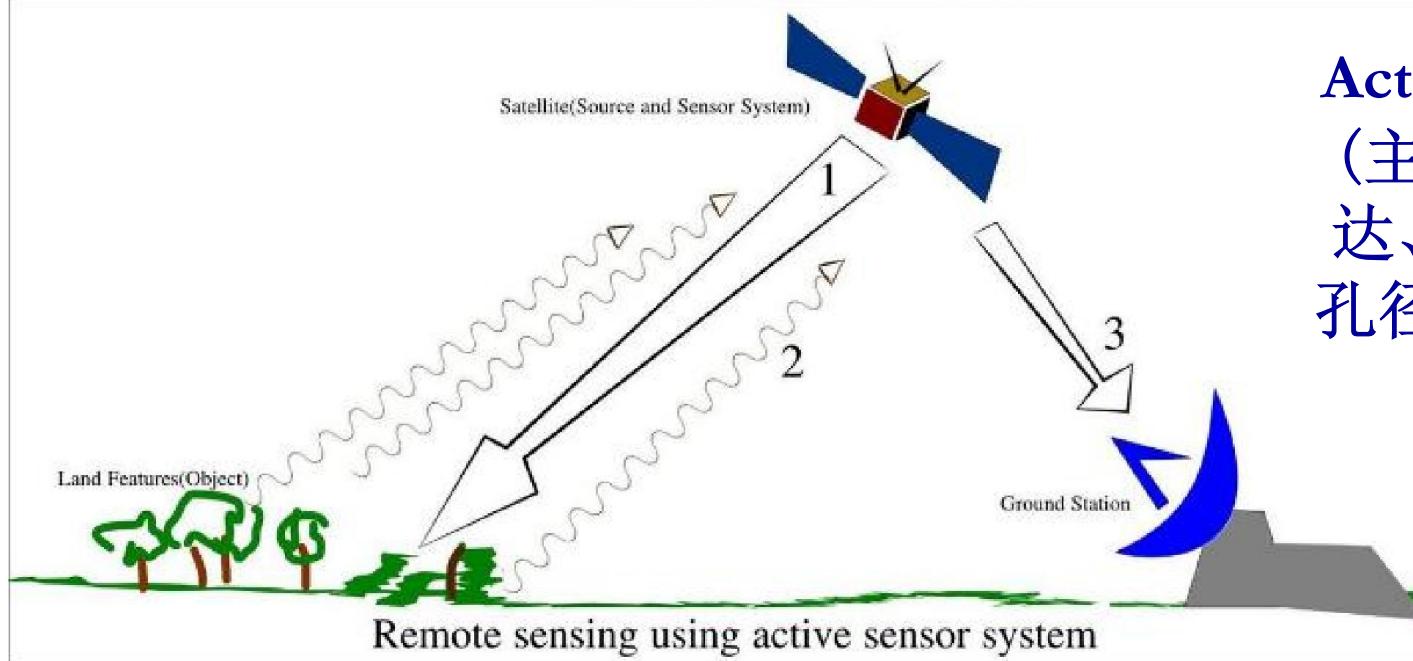

It may be split into **active remote sensing** (when a signal is first emitted from aircraft or satellites) or **passive** (e.g. sunlight) when information is merely recorded.

主动式遥感，即由传感器主动地向被探测的目标物发射一定波长的电磁波，然后接受并记录从目标物反射回来的电磁波。

被动式遥感，即传感器不向被探测的目标物发射电磁波，而是直接接受并记录目标物反射太阳辐射或目标物自身发射的电磁波。

Passive remote sensing
(被动遥感)

Active remote sensing
(主动遥感): 普通雷达、侧视雷达，合成孔径雷达，红外雷达、激光雷达

三、按数据记录方式分类

Remote Sensing Development (遥感发展史)

一、无纪录的地面遥感阶段: 1608-1838

1608年，汉斯·李波尔赛制造了世界第一架望远镜，1609年伽利略制作了放大倍数3倍的科学望远镜，从而为观测远距离目标开辟了先河。但望远镜观测不能把观测到的事物用图像的方式记录下来。

Remote Sensing Development (遥感发展史)

二、有记录的地面遥感阶段：1839–1857

对探测目标的记录与成像始于摄影技术的发明，并与望远镜相结合发展为远距离摄影。1839年，达盖尔发表了他和尼普斯拍摄的照片，第一次成功地把拍摄到的事物形象地记录在胶片上。1849年，法国人艾米·劳塞达特制定了摄影测量计划，成为有目的有记录的地面遥感发展阶段的标志。

Remote Sensing Development (遥感发展史)

三、航空遥感摄影阶段：1858–1956

1858年，G·F·陶纳乔用气球拍摄了法国巴黎的“鸟瞰”像片。

1860年，J·W·布莱克与S·金乘气球升空至603 m 成功地拍摄了美国波士顿市的照片。

1903年W·莱特和O·莱特发明了飞机，促进了航空遥感向实用化的迈进。

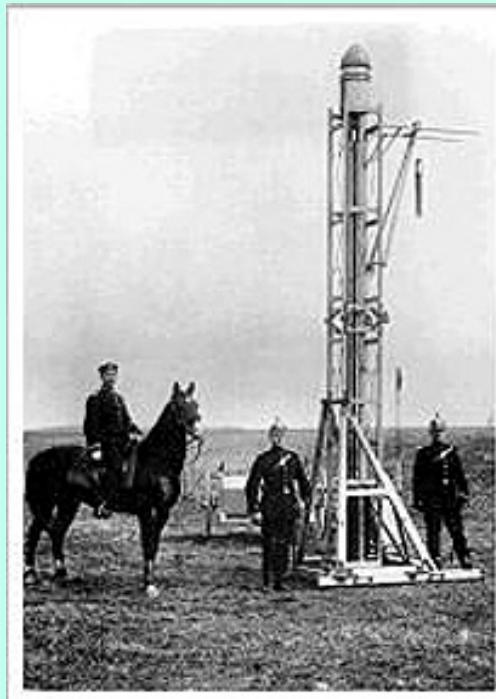

在第一次世界大战期间1914–1918，航空摄影成了军事侦察的重要手段，并形成了一定的规模。

在第二次世界大战期间1939–1945，出现微波雷达及红外技术并应用于军事侦察，扩展了遥感探测的电磁波谱段。

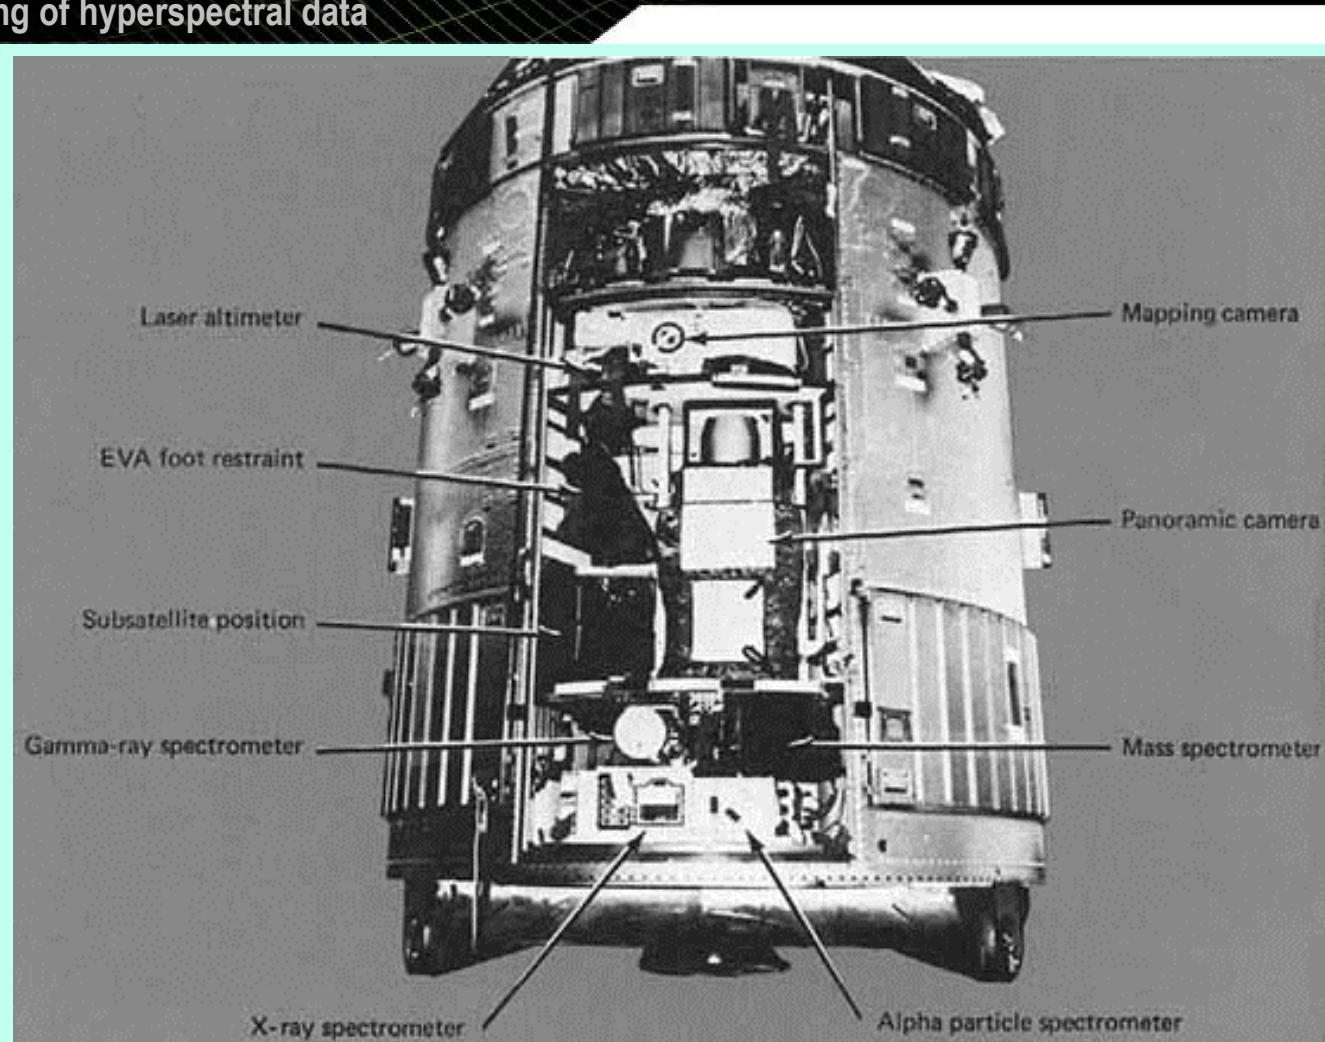

Remote Sensing Development (遥感发展史)

四、航天遥感摄影阶段：1957-

1912年，德国人摩尔发射了一枚火箭，将一架 200 毫米 × 250 毫米的照像机带到 790 米的高空摄影。

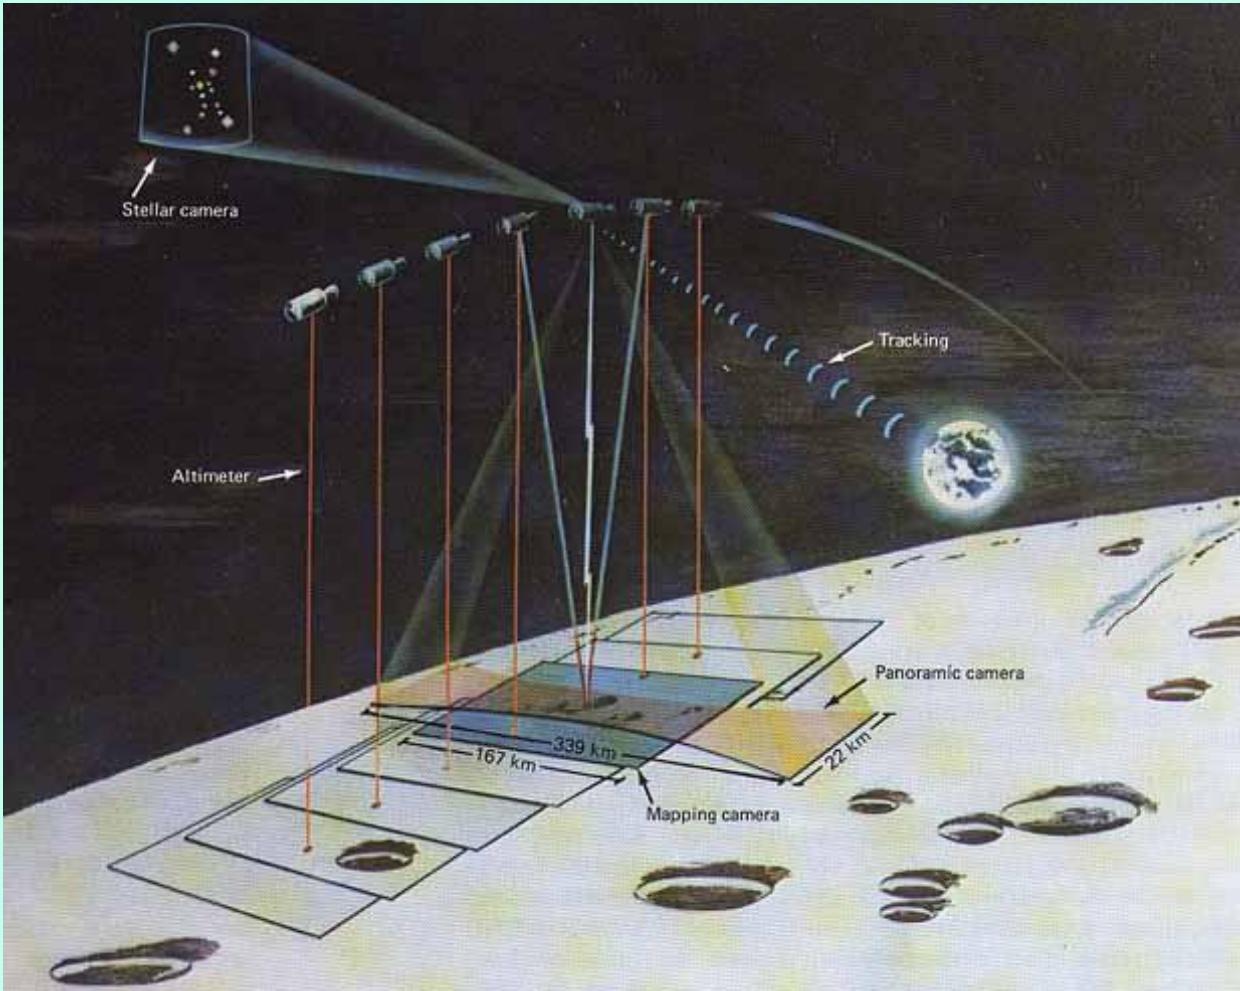

Apollo photographic system

The mapping camera system consisted of a terrain camera coupled to a stellar camera and a laser altimeter. Each exposure of the terrain camera was accompanied by a stellar camera exposure of the star field to provide a means of determining the orientation of the spacecraft in space. Simultaneously the laser altimeter recorded the height of the spacecraft above the Moon's surface.

Introduction to spectral unmixing of hyperspectral data

From "APOLLO
OVER THE MOON:
A VIEW FROM
ORBIT" by Harold
Masursky et al

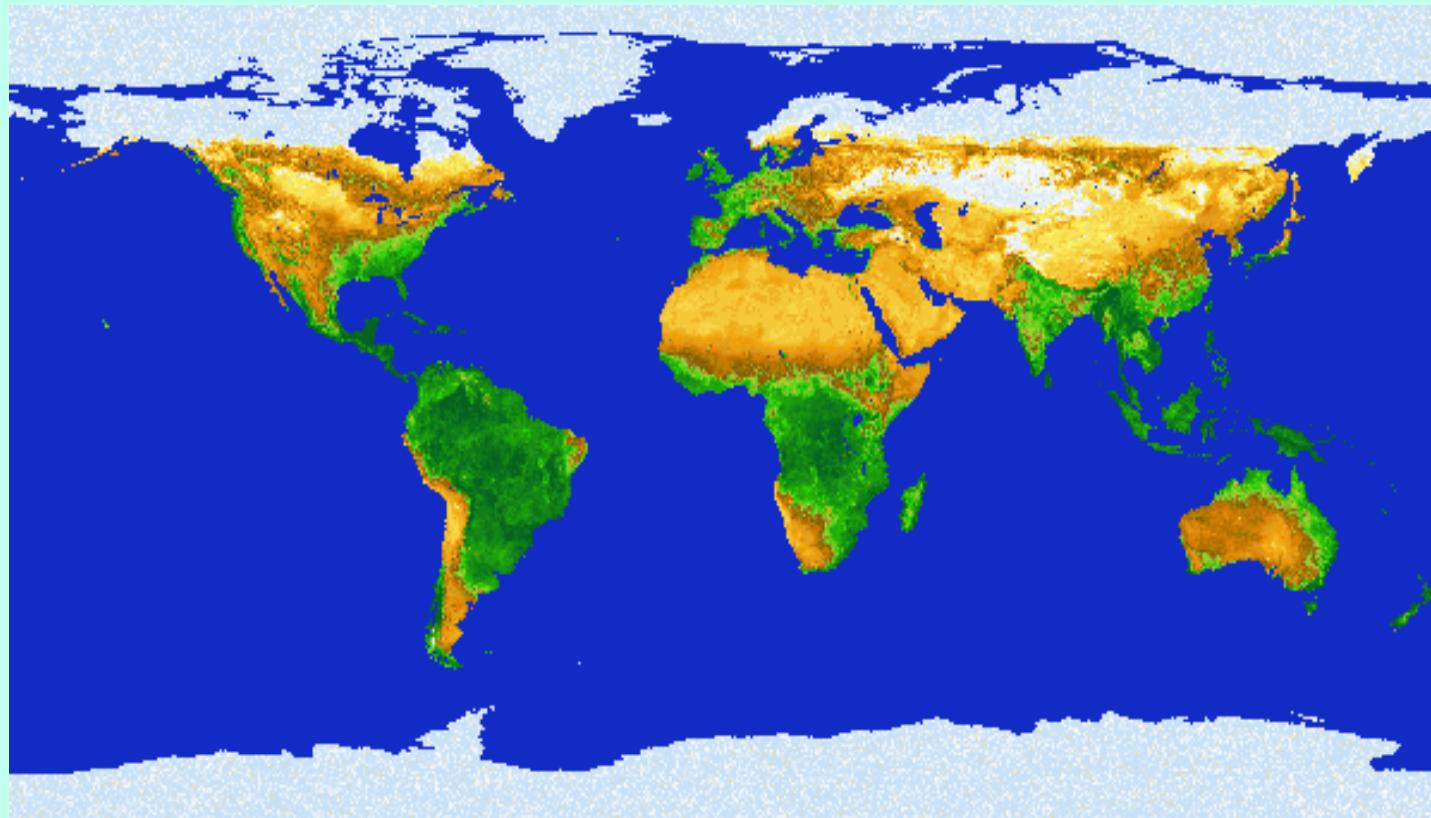

For **the mapping camera**, when the axis is perpendicular to the surface (red lines), each exposure outlines a square area (the blue parallelogram in this perspective view).

For **the panoramic camera**, the areas covered by each exposure overlap to form a continuous strip across the surface.

Basic Concept (基本概念)

Spatial resolution (空间分辨率)

Spectral resolution (光谱分辨率)

Temporal resolution (时间分辨率)

Panchromatic (全色)

Multispectral (多光谱)

Hyperspectral (高光谱)

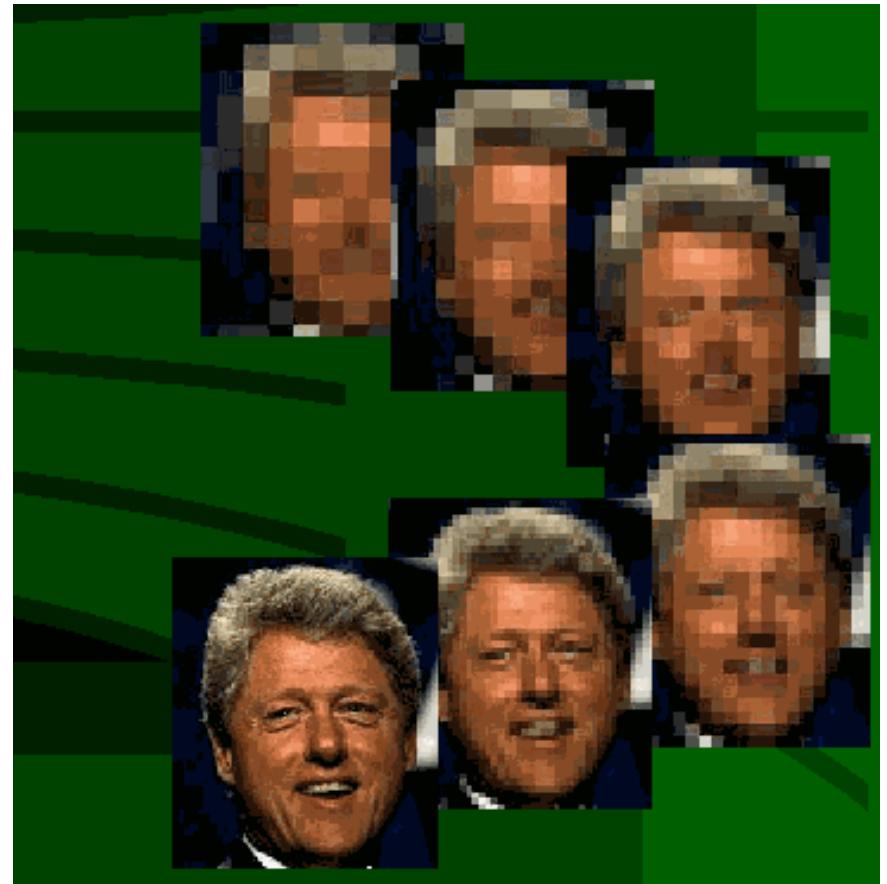

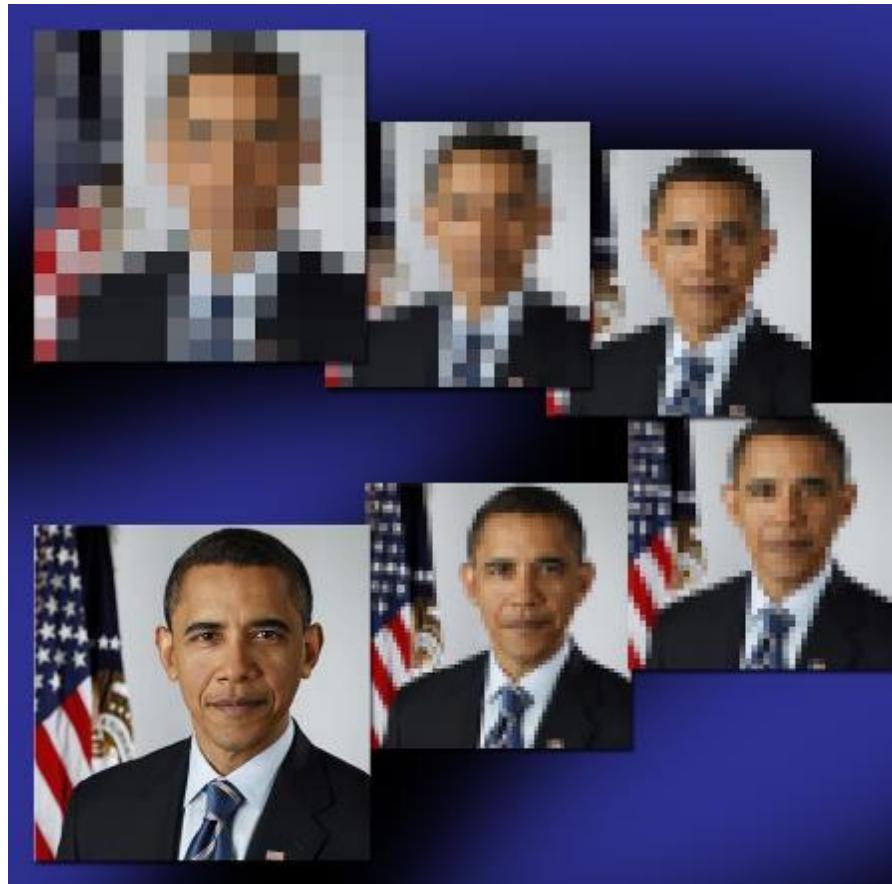

Spatial resolution (空间分辨率)

Spatial resolution is a term that refers to **the number of pixels** utilized in construction of a digital image. Images having higher spatial resolution are composed with a greater number of pixels than those of lower spatial resolution.

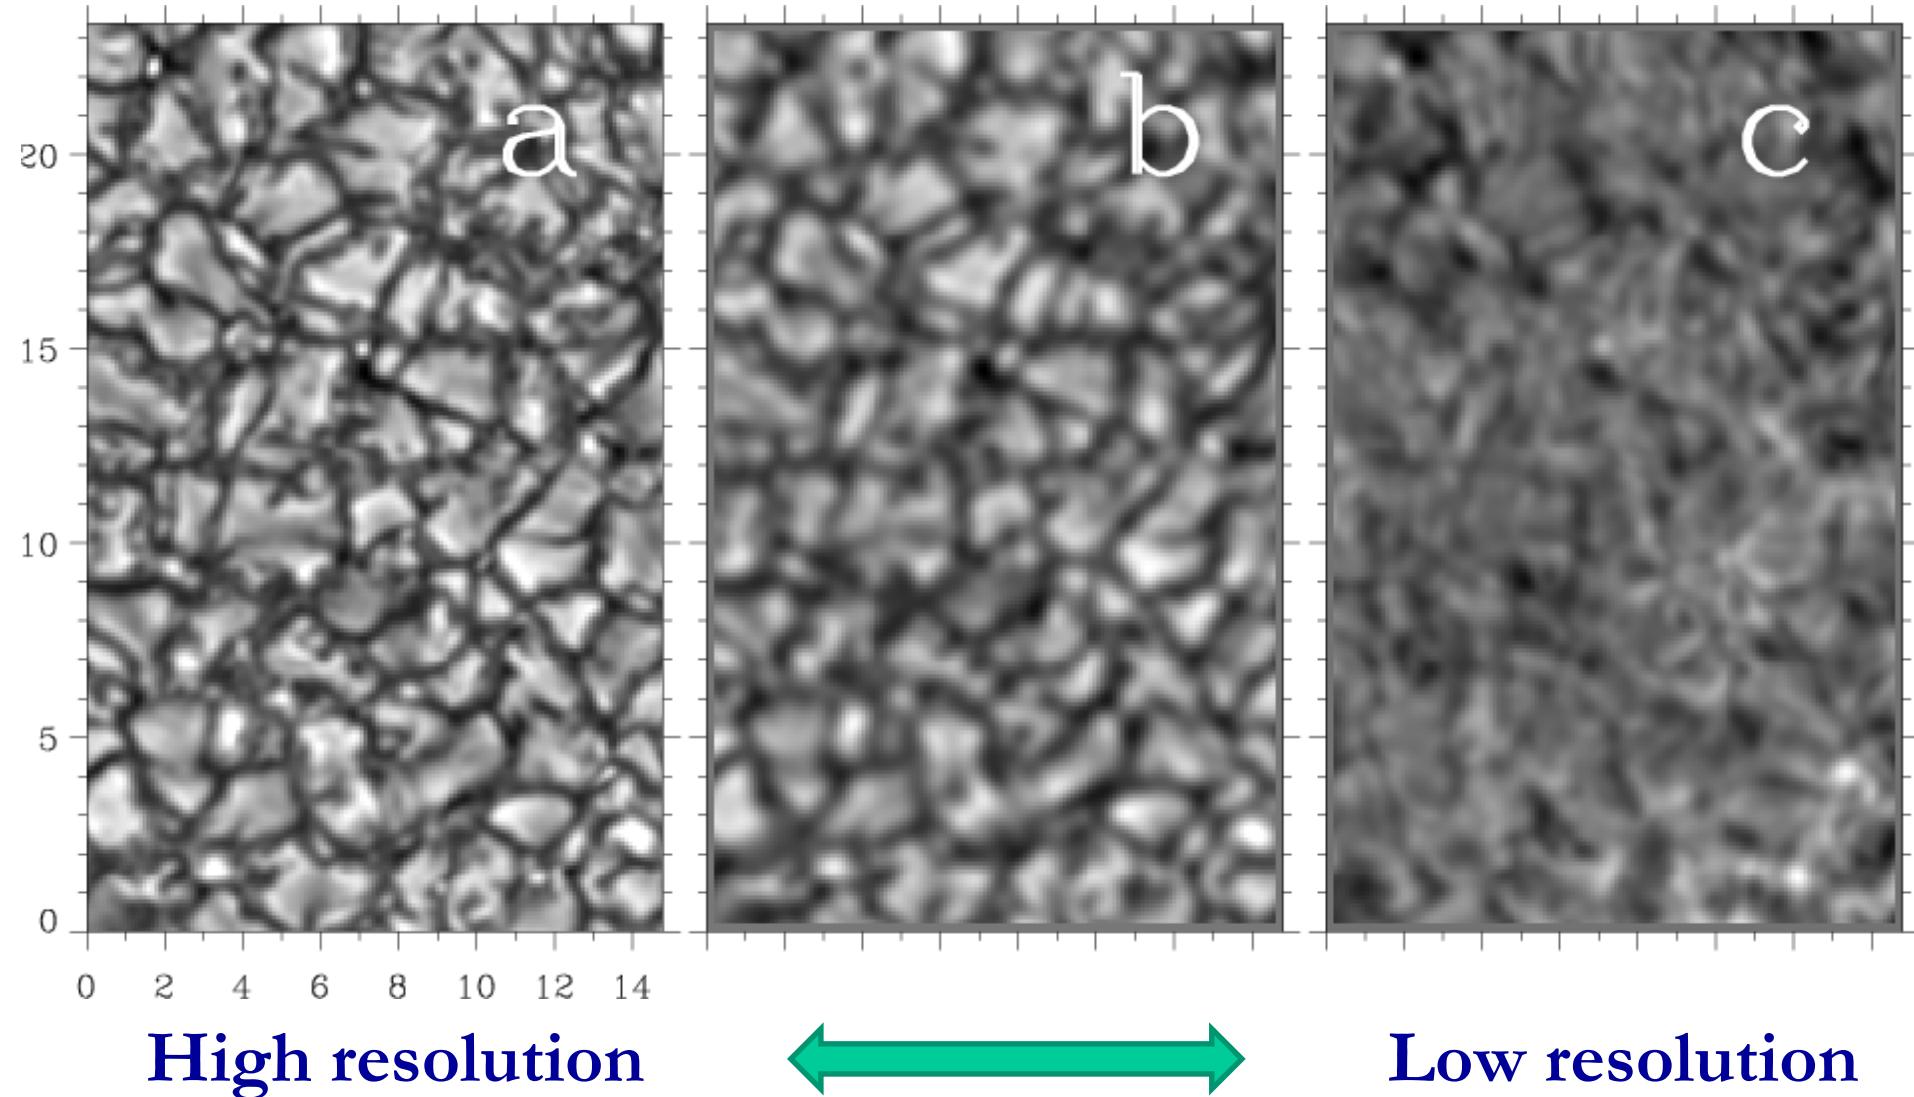

空间分辨率是指像素所代表的地面范围的大小，即扫描仪的瞬时视场，或地面物体能分辨的最小单元。

空间分辨率是指遥感影像上能够识别的两个相邻地物的最小距离。

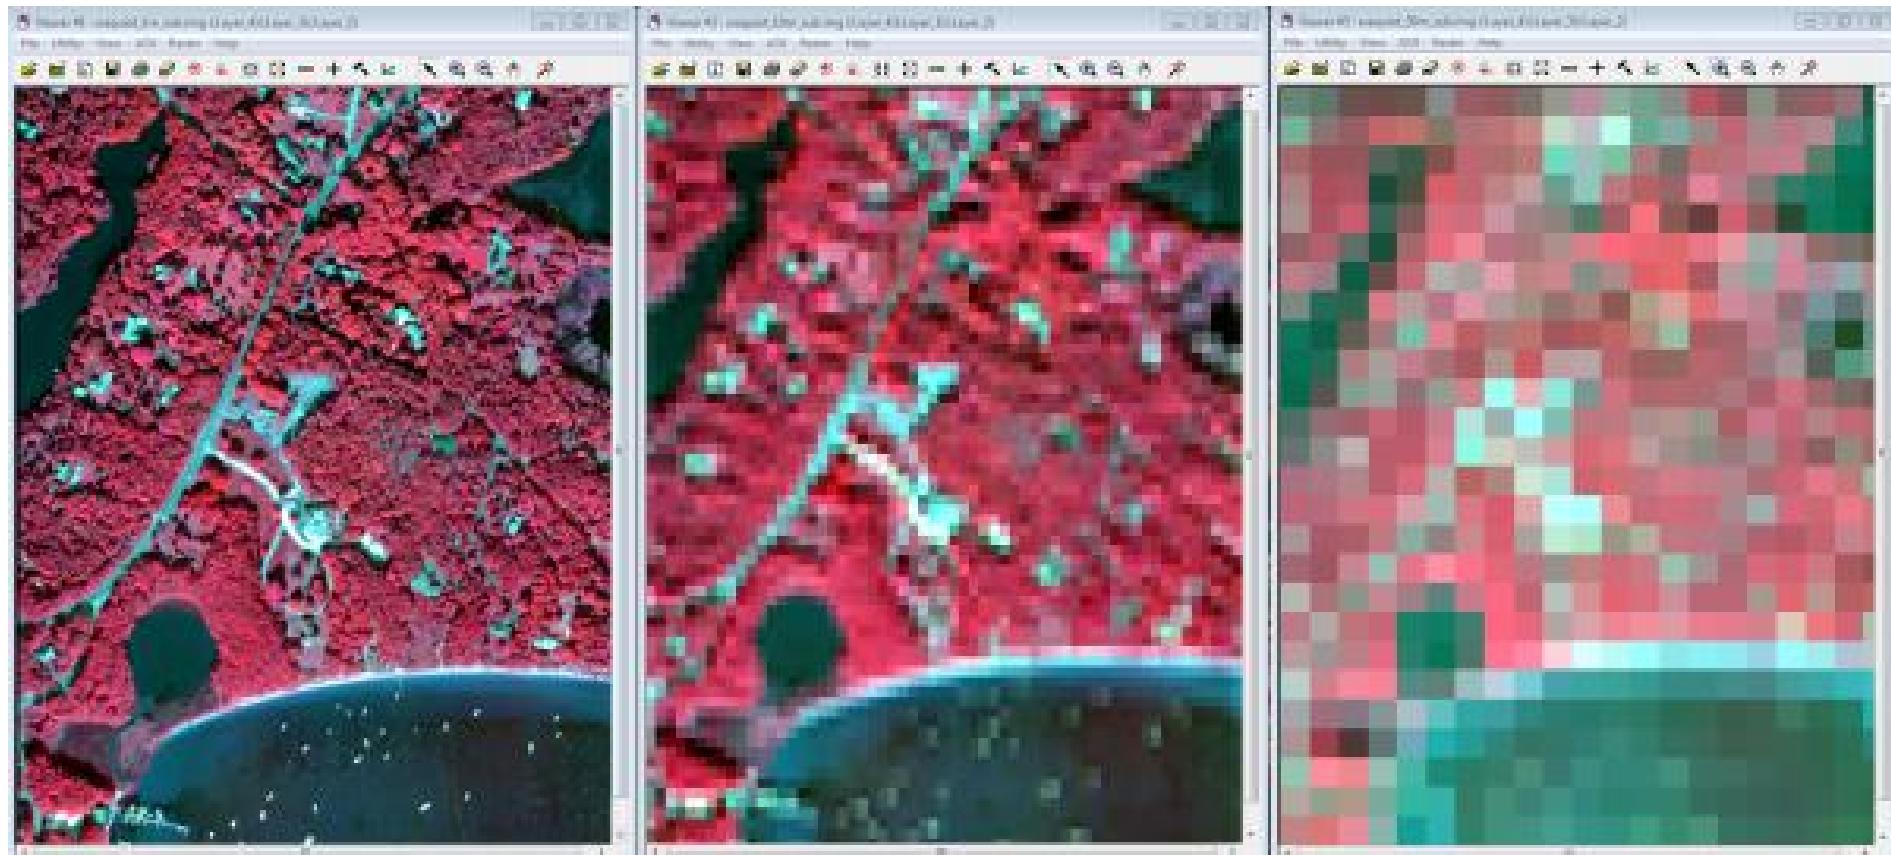

Spatial resolution (空间分辨率)

Spatial resolution (空间分辨率)

Spatial resolution (空间分辨率)

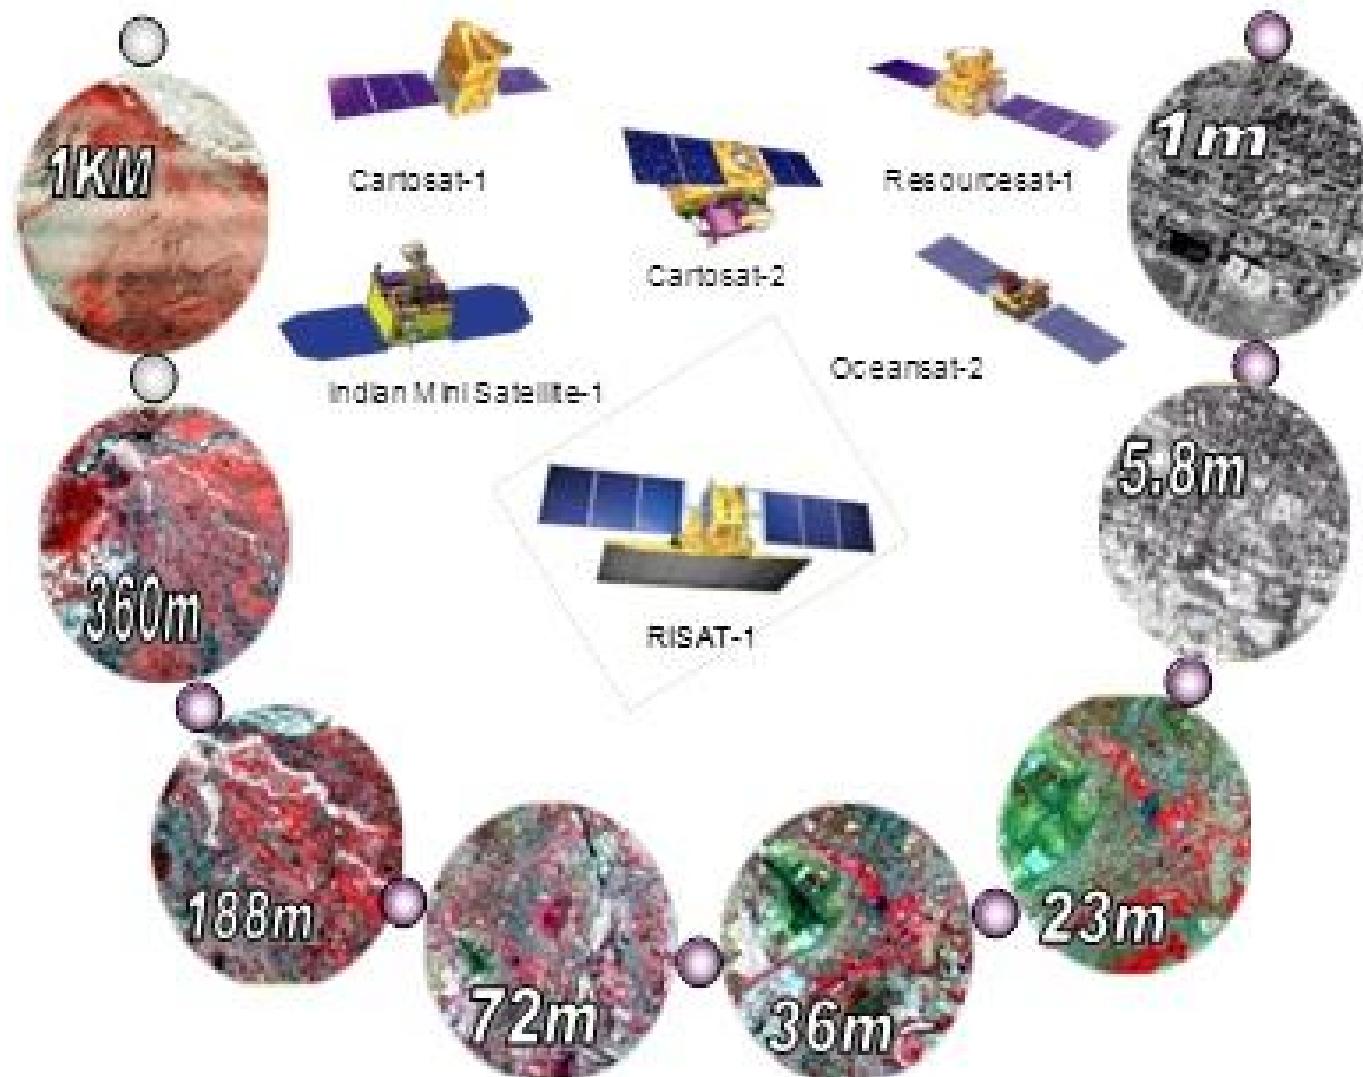

High resolution

Low resolution

Spatial resolution (空间分辨率)

Basic Concept (基本概念)

Spatial resolution (空间分辨率)

Spectral resolution (光谱分辨率)

Temporal resolution (时间分辨率)

Panchromatic (全色)

Multispectral (多光谱)

Hyperspectral (高光谱)

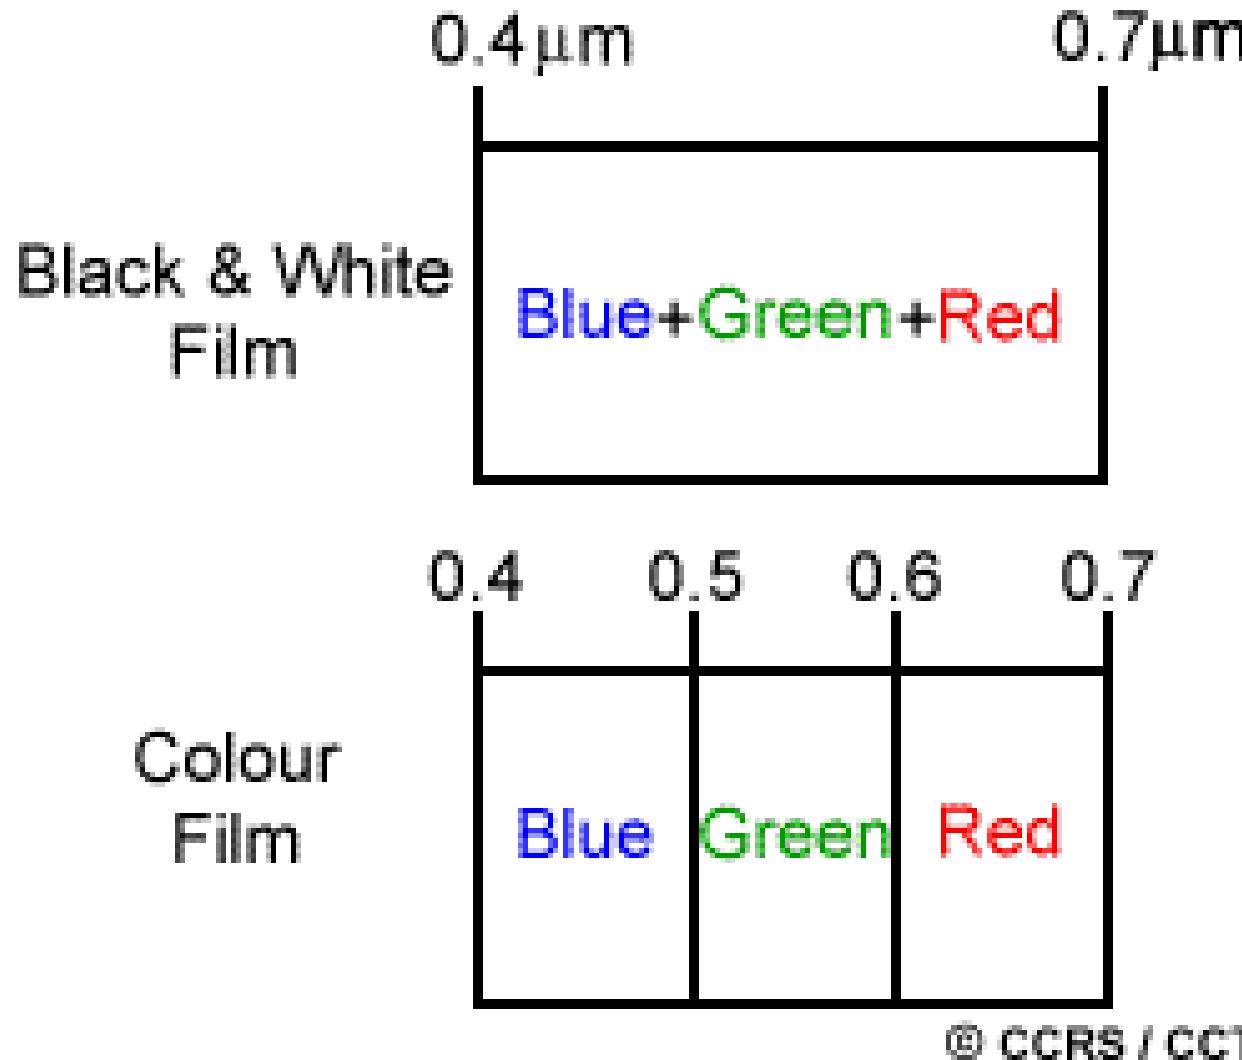

Spectral resolution (光谱分辨率)

The **spectral resolution** of a spectrograph, or, more generally, of a frequency spectrum, is a measure of its ability to resolve features in the electromagnetic spectrum.

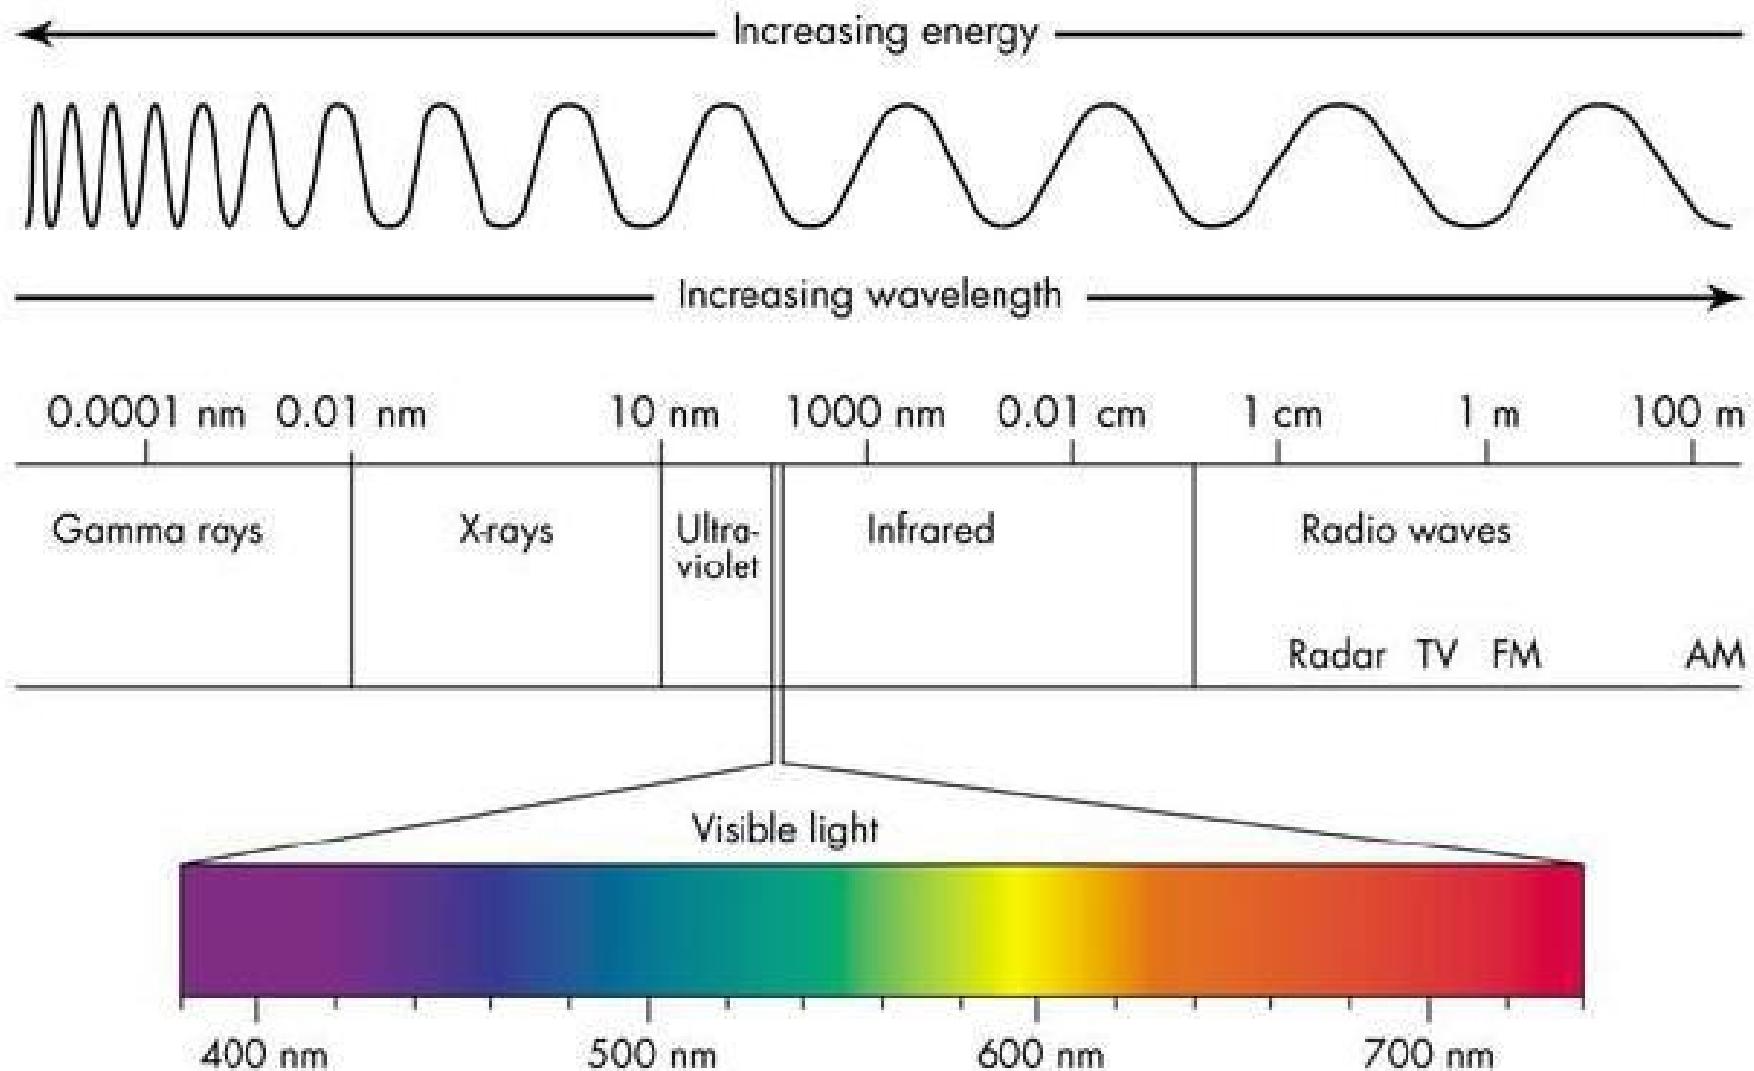

光谱分辨率是指探测器在波长方向上的记录宽度，又称波段宽度 (band width)。

光谱分辨率为探测光谱辐射能量的最小波长间隔，而确切的讲，为光谱探测能力。

Spectral resolution (光谱分辨率)

Spectral resolution (光谱分辨率)

Basic Concept (基本概念)

Spatial resolution (空间分辨率)

Spectral resolution (光谱分辨率)

Temporal resolution (时间分辨率)

Panchromatic (全色)

Multispectral (多光谱)

Hyperspectral (高光谱)

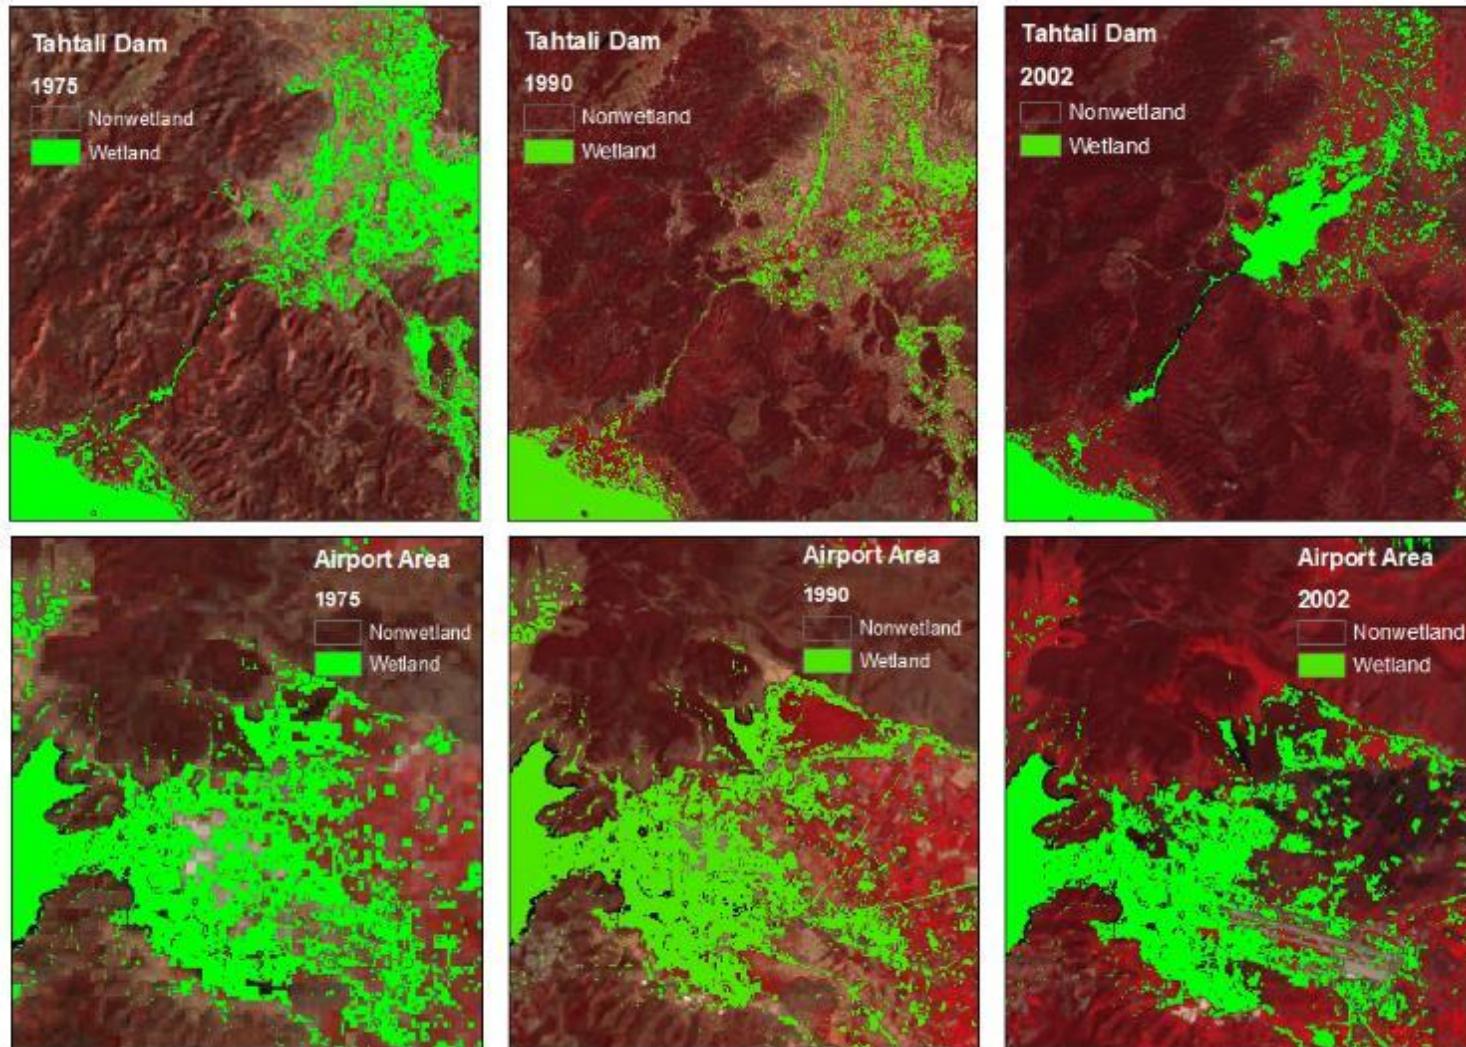

Temporal resolution (时间分辨率)

Temporal resolution (TR) refers to the precision of a measurement with respect to **time**. Often there is a tradeoff between temporal resolution of a measurement and its spatial resolution.

时间分辨率是指在同一区域进行的相邻两次遥感观测的最短时间间隔。对轨道卫星而言，亦称覆盖周期。

时间间隔大，时间分辨率低，反之时间分辨率高。

Temporal resolution (时间分辨率)

Basic Concept (基本概念)

Remote Sensing (遥感)

Spatial resolution (空间分辨率)

Spectral resolution (光谱分辨率)

Temporal resolution (时间分辨率)

Panchromatic (全色)

Multispectral (多光谱)

Hyperspectral (高光谱)

Panchromatic (全色)

Panchromatic refers to black and white imagery exposed by all visible light. However, panchromatic photography and digital imagery is often acquired using a minus blue filter to reduce the scattering that occurs in those blue wavelengths.

全色波段，一般指使用0.5微米到0.75微米左右的单波段，即从绿色往后的可见光波段。全色遥感影像也就是对地物辐射中全色波段的影像摄取，因为是单波段，在图上显示是灰度图片。全色遥感影像一般空间分辨率高，但无法显示地物色彩。

Panchromatic (全色)

Basic Concept (基本概念)

Remote Sensing (遥感)

Spatial resolution (空间分辨率)

Spectral resolution (光谱分辨率)

Temporal resolution (时间分辨率)

Panchromatic (全色)

Multispectral (多光谱)

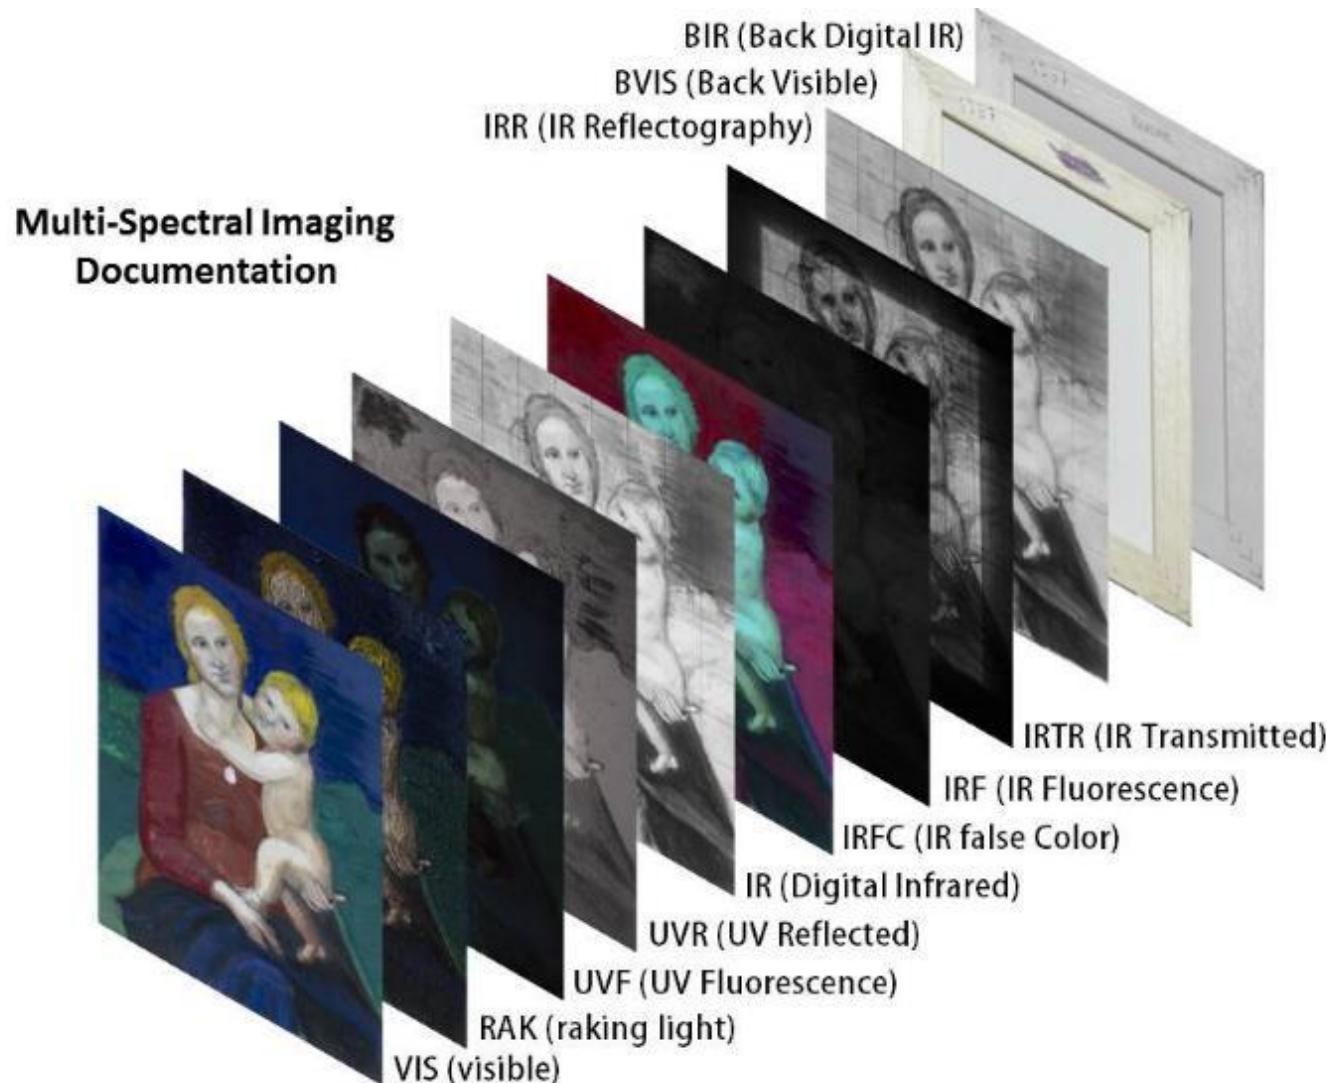

Hyperspectral (高光谱)

Multispectral (多光谱)

A **multispectral** image is one that captures image data at specific frequencies across the electromagnetic spectrum. The wavelengths may be separated by filters or by the use of instruments that are sensitive to particular wavelengths, including light from frequencies beyond the visible light range, such as infrared.

多光谱分辨率遥感，是利用具有两个以上波谱通道的传感器对地物进行同步成像的一种遥感技术，它将物体反射辐射的电磁波信息分成若干波谱段进行接收和记录。

Multispectral (多光谱)

Basic Concept (基本概念)

Remote Sensing (遥感)

Spatial resolution (空间分辨率)

Spectral resolution (光谱分辨率)

Temporal resolution (时间分辨率)

Panchromatic (全色)

Multispectral (多光谱)

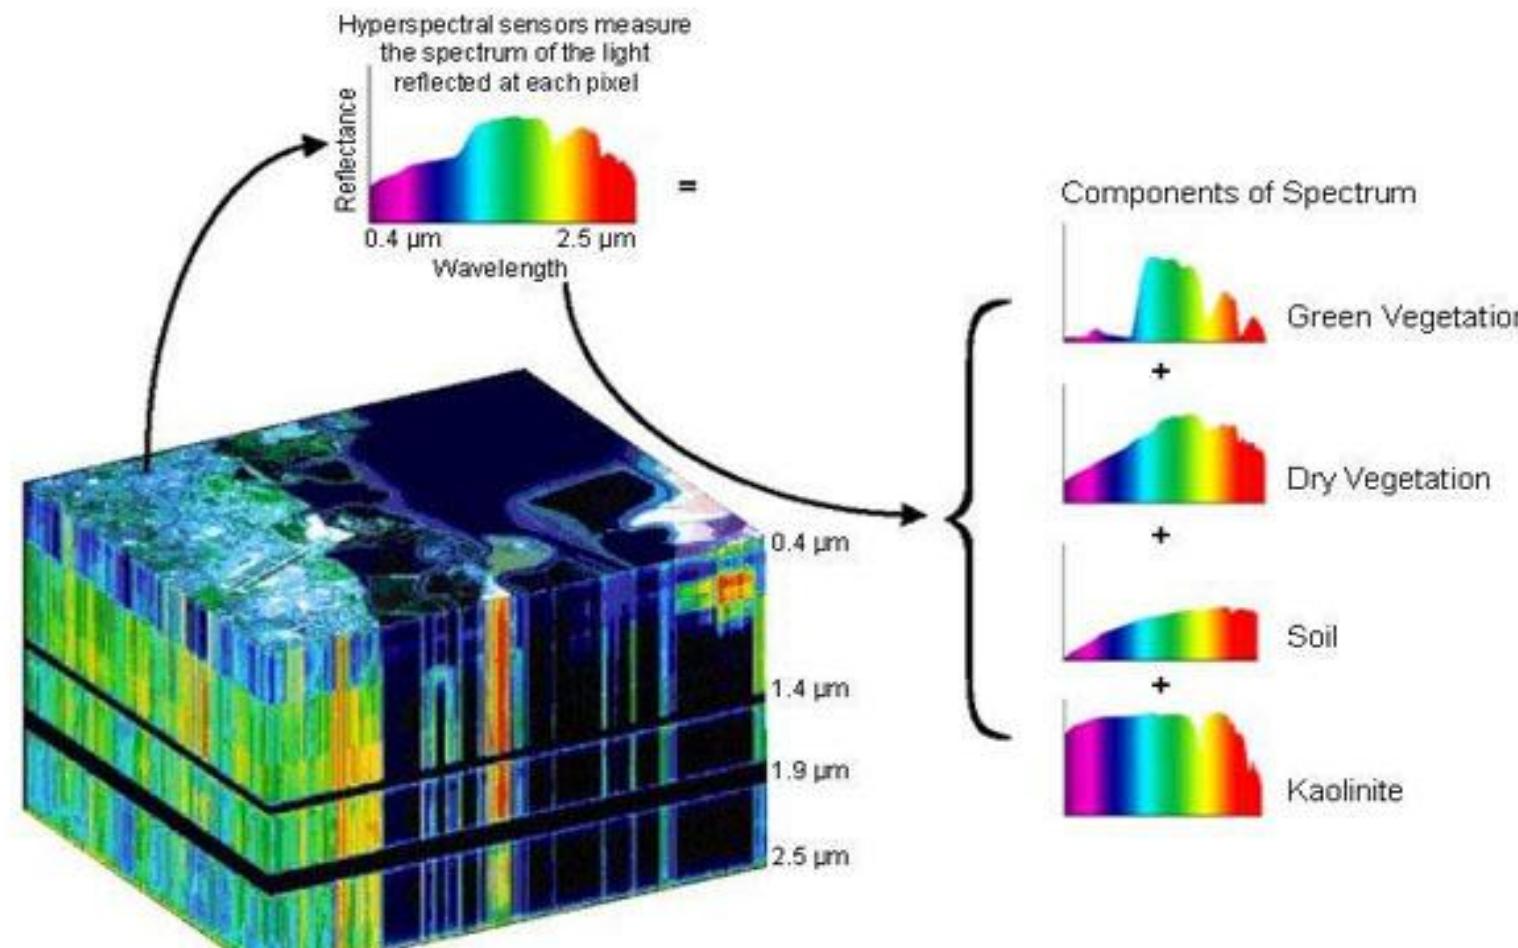

Hyperspectral (高光谱)

Hyperspectral (高光谱)

Hyperspectral imaging, like other spectral imaging, collects and processes information from across the electromagnetic spectrum. The goal of hyperspectral imaging is to obtain the spectrum for each pixel in the image of a scene, with the purpose of finding objects, identifying materials, or detecting processes.

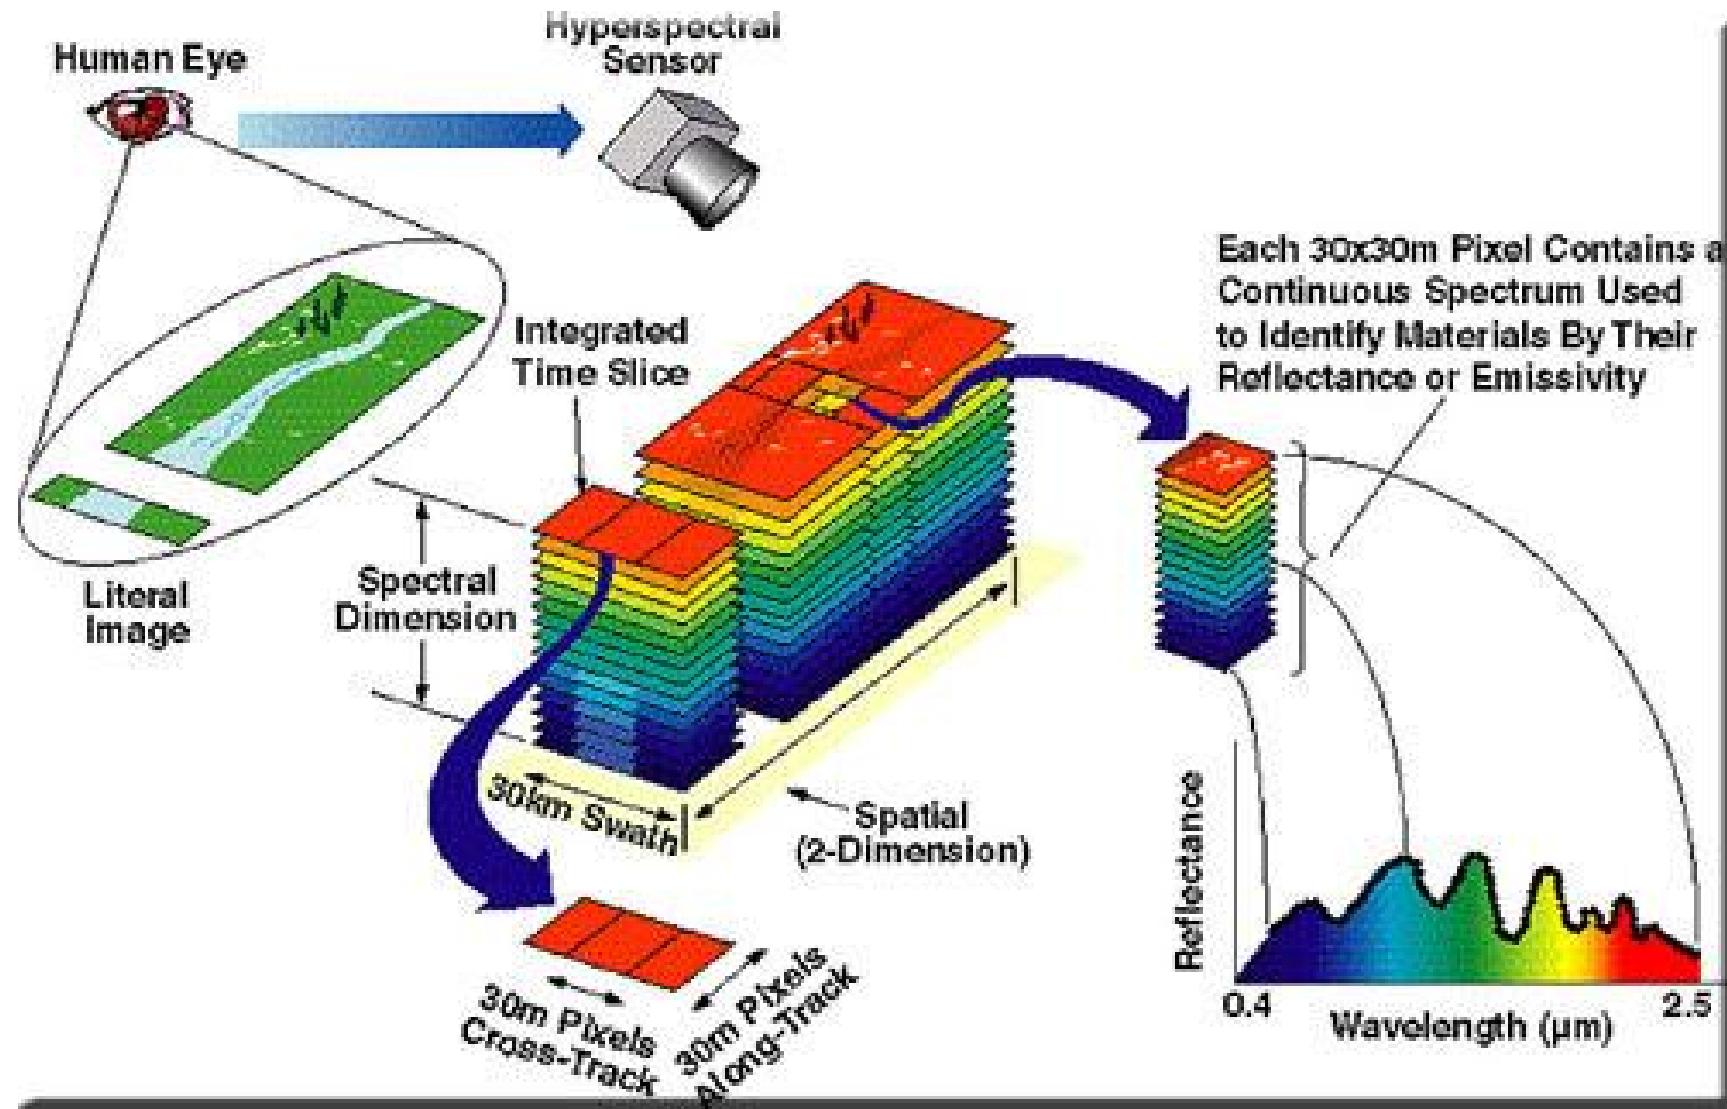

高光谱分辨率遥感在电磁波谱的可见光、近红外、中红外和热红外波段范围内，获取许多非常窄的光谱连续的影像数据的技术。其成像光谱仪可以收集到上百个非常窄的光谱波段信息。
